PERSONAL PROJECTS

Food Ordering System

- Food Ordering System project is to develop a digital platform that simplifies the process of ordering food from restaurants.
- I have added a few items to it and if want to order the item then we can add it to the cart.

Weather Detector

- Weather Detector project is to develop a website that can collect and analyze weather-related data
- And to provide accurate and real-time information about the current weather conditions.

Arduino Based Ultrasonic Radar Detection

- The main aim of the Arduino Based Ultrasonic Radar Detection project is to develop a system that can detect objects in its surroundings.
- The project utilizes Arduino microcontrollers and ultrasonic sensors to achieve this goal. The system accurately measures the distance and angle of detected objects.
